

Focus area Evolutionary Medicine II	
Module code	<b>mIsEvoMedII-01a</b>
Abbreviated title	EvoMed II
Module components	Lab seminar, lab practical, joint seminar of all focus areas
When	Semester 3
Module coordinator/ Organiser	J. Baines IEM
Lecturers	<b>J. Baines</b> (IEM), A. Nebel (IKMB), principal investigators of research groups working on research topics of focus areas (joint seminars)
Contact hours	Practical 9 CH      Lab seminar 1 CH      Joint seminar 1 CH
Workload	<u>Lab practical: 240 h</u> Attendance time 100 h, preparation 60 h, revision 80 h <u>Lab seminar: 60 h</u> Attendance time 14 h, preparation 26 h, revision 20 h <u>Joint seminar "Current affairs":</u> Attendance time 14 h, preparation 10 h, revision 6 h
Total: 330 h	
Credit points	11 (practical 8 CP, lab seminar 2 CP, joint seminar 1 CP)
Requirements	<i>EvoMed I</i> passed
Expected outcome	<p><u>Knowledge:</u> Students</p> <ul style="list-style-type: none"> <li>- are familiar with the theories in evolutionary science important in medical research</li> <li>- have acquired in-depth knowledge on physiological and molecular processes important in evolutionary medicine</li> <li>- are familiar with lab techniques in molecular evolutionary research described in the literature and can explain them</li> <li>- have a thorough understanding of the experiments conducted during the practical.</li> </ul> <p><u>Skills:</u> Students</p> <ul style="list-style-type: none"> <li>- can formulate testable evolutionary hypotheses pertaining to medical diseases and conditions</li> <li>- can distinguish between proximate (e.g. mechanistic) versus evolutionary explanations for medical diseases and conditions</li> <li>- can conduct the different steps of their lab experiments and explain them</li> <li>- are able to perform quality control measures for the results obtained</li> <li>- can analyse their results and put them into relation to the research area.</li> </ul> <p><u>Competences:</u> Students</p> <ul style="list-style-type: none"> <li>- can select adequate research techniques from molecular biology, evolutionary biology, human genetics and apply them to scientific questions in evolutionary medicine</li> <li>- can plan experiments, analyse the data obtained and interpret results</li> <li>- can reflect on their own work critically and integrate new results adequately</li> <li>- can familiarize themselves with a topic and develop research approaches</li> </ul>

	- are aware of the connections between the topics of the different focus areas, can link and explain them.
Content	<p><u>Seminar</u>: Preparation of a project by literature research and discussions with fellow students and lecturers. Discussion of current papers including method papers.</p> <p><u>Practical</u>: Execution of a lab project on topics such as identifying disease-causing candidate mutations using population genetic and/or molecular evolutionary methods, studying the phylogeny and diversification of disease genes, studying the function of a disease gene in model organisms such as mouse, fruit fly or hydra, performing experimental evolution in bacteria and/or viruses to understand principles of the evolution of antibiotic resistance or virulence.</p> <p><u>Joint seminar</u>: Joint discussion of papers relevant for all focus areas.</p>
Module evaluation/ exam	<b>Graded</b> Scientific essay with oral presentation
Media used	PPT presentations, handouts, lab experiments
Literature	<p>Ridley M, Evolution (John Wiley &amp; Sons 2003) [still valid, no new edition available] Gluckman P, Beedle A, Hanson M, Principles of Evolutionary Medicine (OUP 2<sup>nd</sup> edition, 2016) Stearns S, Medzhitov R, Evolutionary Medicine (Sinauer Associates 2015) Current original publications and reviews</p>
